ONE-PAGE HACKATHON PROJECT DESCRIPTION • BUILDER: SAMARTH MISHRA

MediSetu AI — Student & Community Health Companion

Bilingual Prescription Simplifier, Exam Burnout Check, Voice Readout & Offline First-Aid Hub

🔗 **Live Deployed Web App:** https://samarthmishra12345678-lab.github.io/medisetu-ai/
🔗 **Public GitHub Repository:** https://github.com/samarthmishra12345678-lab/medisetu-ai

1. Problem Statement & Target Users

Students, parents, and elderly community members frequently struggle with confusing lab reports and prescription shorthand (`Hb`, `OD BBF`, `BD PC`, `SOS`, `HS`), unaddressed academic burnout among high-schoolers, and dangerous myths during everyday medical emergencies (heatstroke, school fainting, kitchen burns, choking).

2. Key Working Features

- **Prescription & Lab Report Decoder:** Converts clinical values and Latin abbreviations into clear plain-language action cards with practical nutrition tips.
- **Bilingual Accessibility + Voice Read-Aloud:** Instant toggle between **English** and **Hindi** paired with browser Text-to-Speech (`Web Speech API`) so elders and visually fatigued users can listen hands-free.
- **Student Exam Burnout Gauge & Box-Breathing Timer:** Evaluates sleep hours, continuous study/screen hours, and exam pressure to deliver recovery steps, an interactive 4-4-4-4 breathing pacer, and **14416 Tele-MANAS** student helpline access.
- **Offline Community First-Aid & Daily Dose Tracker:** Verified step-by-step emergency checklists, 1-tap **112 / 108** SOS dialer, and persistent medicine reminders stored via `localStorage`.

3. Technical Architecture & Real-World Impact

Built with clean modular **HTML5, Responsive CSS3, Vanilla JavaScript (ES6+), Browser Web Speech Synthesis API, and LocalStorage**, hosted live on **GitHub Pages**. Zero login barrier ensures instant access on any budget smartphone across schools, homes, and rural communities.
